

SEDATION DENTISTRY

SOMETIMES ALL YOU NEED IS A LITTLE HELP

There is absolutely no reason anyone should be uncomfortable during a dental procedure. Dr. Mia wants all her patients to be as comfortable during their treatment and wants every visit to be as pleasant as possible. That's why sedation and anesthesia are available to patients of all ages at Smiles by Mia.

THE MANY USES OF SEDATION DENTISTRY

Sedation is most often used for patients who have a fear of pain or experience dental anxiety. At Smiles by Mia we offer sedation dentistry for other uses, as well. These can include use on children who are unable to sit still for a procedure, or children and individuals with special needs who may be confused by the procedure that's going on around them. In all cases, Dr. Mia and her team will provide the sedation in an environment that includes maximum comfort and minimum stress – two elements that are guaranteed to reduce anxiety.

TYPES OF SEDATION AND ANESTHETIC DENTISTRY

Smiles by Mia offers the following types of sedation and anesthesia: local anesthetic and general anesthesia.

SEDATION DENTISTRY CAN BE USED IN MANY PROCEDURES

Even if it's a simple procedure such as cleanings or filling, some patients find that, without the help of sedation dentistry, they avoid having the procedures done at all. Unfortunately, that can be a very bad decision for a couple of reasons. First, postponing any dental work often leads to more complicated procedures needing to be done down the road. Also, many patients have found that when they utilize sedation dentistry a few times, they are able to wean themselves off of the need for sedation in the future.

If you would like to learn more about sedation or want to use sedation to get your treatment done, call Smiles by Mia at (703) 323-1300 today!
